

Channels Information Technology Pvt. Ltd.

Company Profile

Company Vision

Channels Information Technology Pvt. Ltd. was founded in 1997 with the objective of providing quality software and technology services.

We provide high value software products, custom developed applications and trained manpower to enhance their return on investment in technology.

Vision Statement:

To develop and deliver technology solutions that enhance productivity and deliver value across all sections of the enterprise.

In the past few years, Channels has effectively serviced several corporate clients in India and abroad with specific solutions that have fit into the operating environment of the firm, while keeping high standards & quality of delivery, enabling the company to develop an enviable reputation for professionalism and timely delivery across its spectrum of services and products.

Methodology / Quality Assurance

At Channels, technology is not an abstract representation in an engineers mind. We work to visualize, implement, test and deploy high value solutions for the real world.

Which means that every one of our products and services are designed and engineered to meet exacting specifications and go well beyond, to ensure that when it use, it delivers even more than what the customer expects.

We call these proactive solutions, where we envision future needs and plan for them at this stage itself. This reduces deployment and integration expenses caused by varied systems being deployed over a long period of time.

We also make it a point to adhere to Open Standards, and not proprietary ones, making it simpler to integrate with existing software if necessary, and leaving possibilities of extending the software to other uses wide open.

Our adherence to quality standards has won us high praise from our clients, who appreciate the fact that their technology systems work without breakdowns and maintenance problems.

Products

Wireless Works TM

This suite of products are mobile applications meant to enable real time data acquisition and to reduce transaction time and cost across any ERP platform. At present there are two applications available on this platform.

DCMS [Direct Channel Management System]

This product is meant for roaming supply-chain management; delivery and invoicing.

It allows the delivery person to complete the entire transaction with each dealers, along with all the related components like stock updates, discounted products, returned stocks etc at the delivery site itself, reducing the lengthy paperwork process on the dealer site and back in the corporate office.

Data can be transferred using wireless technology or stored locally, and can be auto-fed into any ERP system as required. Invoices, challans, acknowledgements and bills can be printed on the spot and handed over.

Surveyor

Surveyor has been designed and written with the field data collection in mind. By simply touching a few buttons on the screen, data required from the respondent can be recorded and saved. Alternately, the data can be transmitted to a remote server over wireless and accumulated into a backend system.

Technology used: Mobile Computing, Embedded VB, .NET Framework, GPRS and mobile telephony.

Hardware: PDA and portable printer. (if printing required)

ERP Solution for Textile Manufacturers.

This ERP solution has already been deployed at several different textile manufacturing units. The highlights of the software are

- ✚ Customized to fit textile business processes.
- ✚ Capable of running on older computers.
- ✚ Modular implementation, each module is customized to the departments needs.
- ✚ Very low training curve; does not take much time to move to the new software.
- ✚ Data can be moved from older/existing system to the new ERP software.
- ✚ Capable of servicing millions of entries
- ✚ Full support for auditing of accounts under Indian Govt. Law
- ✚ Very low deployment time required; as little as 4 weeks, as compared to other vendors who may take as much as 2 years.
- ✚ Data backup and replication available.
- ✚ Secure and safe software; data cannot be accessed with authorization.
- ✚ E-enabled software, can deliver automated reports to managers on their desktop, and can be mailed or accessed anywhere in the world.
- ✚ Modules available are: Sales, Billing, Procurement, Stores, Accounts and Production. Web enabled reports will be available through TEXFamily.com, using the required authorization.

Similar ERP software is also available for the Courier Industry with tracking and routing of movement; and reports.

Recruit Tracker TM

This is a specialized tool developed to help consulting firms cope with the recruitment process in an organized and effective manner. At present, there is no product that gives all these features for collecting, tracking and scheduling potential candidates. The principal features are:

- ✚ Automatic Attachment and mailing of requisite CVs
- ✚ Reminders to clients for pending feedbacks
- ✚ Reports delivered in the form of MS Excel spreadsheets.
- ✚ Intelli-Search of database for suitable candidates
- ✚ MIS Analysis of user and company performance
- ✚ Network/Multi (Client Server) user software
- ✚ Integration with existing database possible
- ✚ Generates headhunting leads
- ✚ Tracks entire process
